SwissPedNet Session: Research in Images

Instructions

Session Concept

This session aims to convey research through

a single, image-centered pdf-slide without any animations or other effects.

Presenter Instructions

Your task is to present your project visually on one slide. Please prepare this slide in advance, using PowerPoint or a PDF format. Keep it focused: showcase only the most essential aspects to create a clear and impactful snapshot.

When presenting, narrate your study journey concisely. Start with a brief background, then walk us through the methodologies and results of your project, and close by situating your findings within the broader research context. Using multiple slides or zooming in and out of the prepared slide is not allowed.

Timing

Each of the 9 presenters has 6 minutes to deliver their project overview and results, followed by 9 minutes for Q&A from both the chairs and audience.

Award

pädiatrie schweiz | pédiatrie suisse kindly offers an award of CHF 3000.- for the winner of this session.
